Yutong ESG

Yutong Bus Co., Ltd.

May, 2026

Yutong ESG

I. Environmental Protection

Global climate change poses a serious threat to both ecosystems and human health. As a global bus leader, Yutong always adheres to the concept of energy conservation, carbon reduction, green development and operations, and practices environmental protection. Up to now, Yutong has sold more than 260,000 units of new energy commercial vehicles. In 2025, cumulative electricity savings reached approximately 1,130 MWh, cumulative natural gas savings reached 730,000 cubic meters, and cumulative carbon dioxide emissions were reduced by approximately 7,920 tons.

Since 2024, Yutong has also launched the “Net Zero Forest” initiative (afforestation), pledging to “plant a tree for every bus sold worldwide”. The first batch of projects was implemented in 2024 across China’s Gansu Province, the UK, Chile, and other locations, planting over 36,000 trees, expected to absorb approximately 18,000 tons of carbon dioxide annually (based on tree species and growth cycles). By the end of 2025, the “Net Zero Forest” project, in collaboration with local nonprofit organizations, had planted a total of 83,700 trees in Gansu Province, China, as well as in the UK, Chile, and Mexico, achieving significant results and contributing to the improvement of local ecosystems through concrete actions. In the future, the project will continue to expand its operations to multiple countries and regions around the world.

In 2024, Yutong launched “Let’s Go Green” initiative to promote eco-friendly travel in response to climate change. The initiative invited passengers to experience green Yutong buses, setting up distinctive landmark or architectural stops for interactions like organized quizzes and Q&A sessions. These efforts aim to deepen public awareness and understanding of green city bus and low-carbon travel. The initiative (Green Mobility Week) was successfully held in Brisbane, Australia in September 2024, followed by in Athens and Thessaloniki, Greece in May 2025. Through partnerships with local customers and dealers, the initiative featured public welfare activities centered on green themes. The initiative not only promoted

environmental awareness and enhanced consciousness about energy-efficient driving but also translated the concept of “green operations” from slogan into tangible actions, contributing to a shared green future.

Meanwhile, Yutong has undergone carbon emission verification and certification audits. So far, a total of 50 commercial vehicle models worldwide have been officially released by international EPD, including 17 models from Yutong, reflecting Yutong’s practical commitment to advancing sustainable development in the transport industry. Yutong has consistently prioritized green products as a key strategy for addressing climate change, and through the continuous optimization of new energy technologies, it is helping to drive the low-carbon transition in the transportation sector. In the field of hydrogen-powered clean energy, the company has established a Research Center for Fuel Cell and Hydrogen Energy Engineering Technology and has sold a total of 896 hydrogen fuel cell buses.

II. Social Responsibility

By the end of 2025, Yutong had donated more than 300 million RMB in cash and in-kind contributions to the community.

In 2022, Yutong partnered with Kazakhstan’s government agencies, transportation authorities, and education departments to launch a school bus safety initiative, aiming to enhance public awareness of transportation safety among local residents. In Astana, Karaganda, Aktobe, and Almaty, a series of intriguing and educational traffic safety camp activities have been conducted to teach children about road safety. These activities, such as setting up traffic signs, safety helmet relay races, visual blind spot demonstrations, and emergency drills for school bus incidents, have attracted over 400 children and parents to join and learn essential knowledge about traffic safety.

In 2025, through initiatives such as the “Golden Autumn Education Assistance” program, “Emergency Relief for Major Social Incidents,” the “Traffic Safety Public Welfare Campaign,” and sponsorship of the “National Vocational Skills Competition” and the “China Formula Student Competition,” the company donated goods and funds

worth over 13 million RMB to impoverished groups and regions, foundations, and social events, demonstrating its commitment to “benefiting society” through concrete actions.

In 2025, Yutong cooperated with the Pakistan Down Syndrome Association (PDSA) to launch the “Golden Ticket” program, offering free specialized transportation and zoo visits for children with down syndrome while working to create an accessible and sustainable environment.

Yutong has always been committed to the research, development, and promotion of new energy buses. The Company places strong emphasis on environment-related factors such as energy and resource consumption, waste management, and carbon emissions. It also provides a fair and equitable working environment, and safeguards the basic rights and interests of its employees, by carrying out production safety management, employee training and development, compensation and benefits, anti-corruption and anti-bribery measures and so on. In 2025, Yutong achieved an industry-leading overall score in the WCA assessment and received EcoVadis Gold Medal certification, ranking among the top companies globally. In 2025, Yutong also passed the SMETA social responsibility audit, meeting global standards in core areas such as human rights protection, labor rights, workplace safety, environmental protection, and business ethics.
